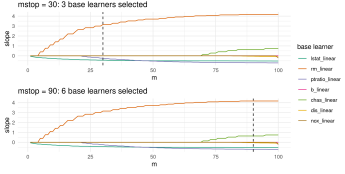
Introduction to Debugging Lectures

Demo Lecture
Layout Macro Testing With Cannibalized Content



Learning goals

- Test layout
- Fix stuff
- Go home

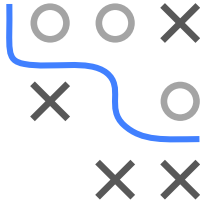
DEMO SLIDES

This is a demo lecture chunk.
It is recommended to view these slides as PDF and LaTeX code side by side
Refer to the `slds-lmu/lecture_debug` repository for the source and PDF:

- Compiled PDF
- LaTeX source

WHATS INSIDE THE TIN

Column layout helpers:



- `\splitV` for two columns of equal / custom widths
- `\splitVCompact`: Compact version of `\splitV`
- `\splitVThree`: 3-column layout (equal widths)
- `\splitVThreeCustom`: Version of `\splitVThree` with custom widths
- `\twobytwo`: 2×2 layout for quadrants, vertically centered

WHATS INSIDE THE TIN / 2

Wrappers for `\itemize` with different vertical spacing:

- `\itemizeS`: `itemsep` is 1pt (less than default)
- `\itemizeM`: `itemsep` is 5pt (slightly larger than default)
- `\itemizeL`: `itemsep` is 15pt (larger than default)
- `\itemizefill`: `itemsep` is `fill` to extend across the available vertical space

TWO COLUMNS, EQUAL SIZES

The `splitV` macro creates two equally wide columns:

```
\splitV{left content}{right content}
```

Left column Lorem ipsum dolor sit amet, consectetur adipiscing elit

Right column Lorem ipsum dolor sit amet, consectetur adipiscing elit

Example with itemize environment left and text right:

- Example itemize content
- Second itemize item

Lorem ipsum dolor sit amet, consectetur adipiscing elit

Note: The macro name `\twocolumn` was already taken!

TWO COLUMNS, UNEQUAL SIZES

If you want to create columns with uneven widths, you only need to specify the width of the first column:

`\splitV[0.75]{left content}{right content}` creates a column with 75% width and the second column will fill the remaining space:

First column with 75% of the text width on the slide

Second column with rest

Tiny column

Second column with a lot of room for activities

TWO COLUMNS, SPECIAL CASES

To enforce vertical centering of the content, use
`\splitVCentered[0.6]{left content}{right content}`
analogously to `\splitV`:

- Example itemize content
- Second itemize item
- A third thing that is also important
- Do you like dogs?
- Hi mom

This text should be vertically centered relative to the left itemize list which is probably good

TWO COLUMNS, SPECIAL CASES / 2

For completeness, there is also a compact version if you do not want to use the full slide width:
`\splitVCompact{0.2}{0.2}` only takes up 20% of the slide width in each column for a total of 40% with a minimal horizontal spacer:

First column with 20%

Second column with 20%

3 COLUMNS

Using `\splitVThree{Left}{Middle}{Right}` for 3 equally sized columns:

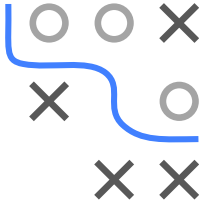
First column content is here	Second column content is here as well	And also a third column is here just in case

Then there is `\splitVThreeCustom` for three columns of arbitrary widths, where the width of the third column can also be inferred from the first two

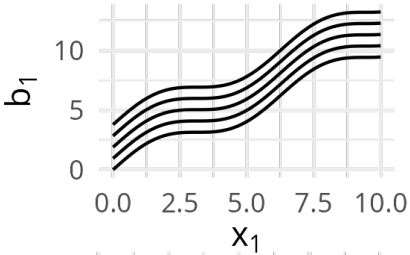
first column with 20% width	second column with 20% width	third column with remaining width

2×2 LAYOUT / QUADRANTS

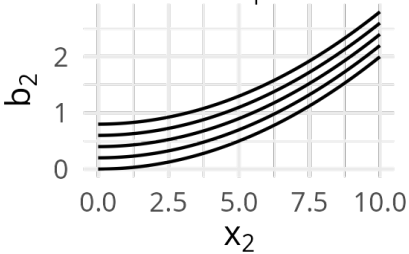
Use `\twobytwo{top left}{top right}{bottom left}{bottom right}` for horizontally aligned quadrants



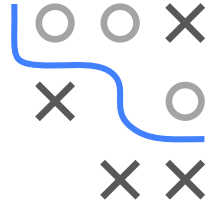
- Example top left...
- ...quadrant content
- Next to a figure

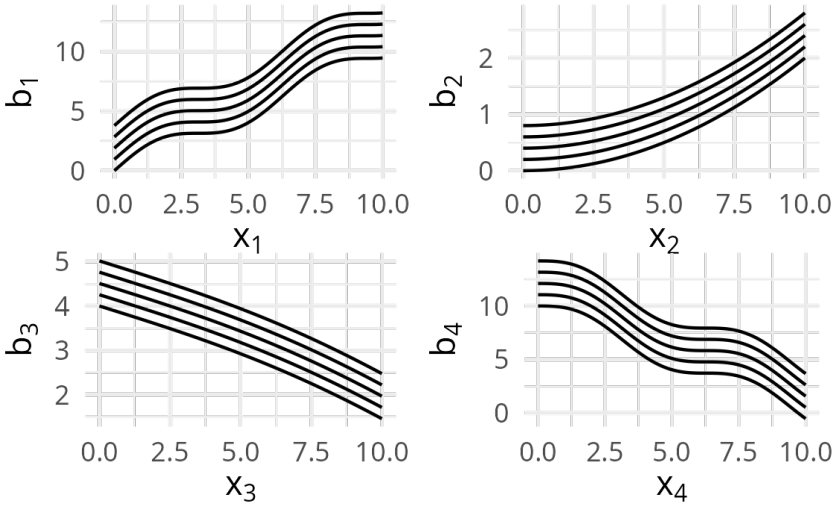


- Bottom left...
- ...quadrant content



2×2 LAYOUT: ALL IMAGES





DISCLAIMER

Please note that all of these spacing and layout wrappers are unfortunately somewhat unstable and ay lead to unexpected / undesired behavior within other environments or in combination with each other.

For example, `\splitV` uses negative spacing below it to prevent wasting space and overflowing to the next frame, but that means that you **will often need** to use `\vfill` after `\splitV` to get the desired vertical spacing.

(In fairness, `\vfill` should probably be used very liberally for vertical spacing anyway)

ITEMIZE WRAPPERS

Presets fro `itemize` with different vertical spacings (`itemsep`). The default value for `itemsep` is apparently `2pt`. Use `\the \itemsep` to find out the current value.

- **Default itemize**
- itemsep is unmodified
- Another thing
- Words
- A fourth thing to show
- Just filling space here
- Hello there

- **Uses environment** `itemizeS`
- itemsep is: 1.0pt
- Another thing
- Words
- A fourth thing to show
- Just filling space here
- Hello there

ITEMIZE WRAPPERS / 2

- **Default itemize**
- itemsep is unmodified
- Another thing
- Words
- A fourth thing to show
- Just filling space here
- Hello there

- **Uses environment** `itemizeM`
- itemsep is: 5.0pt
- Another thing
- Words
- A fourth thing to show
- Just filling space here
- Hello there

ITEMIZE WRAPPERS / 3

- **Default itemize**
- itemsep is unmodified
- Another thing
- Words
- A fourth thing to show
- Just filling space here
- Hello there

- **Uses environment** `itemizeL`
- itemsep is: 15.0pt
- Another thing
- Words
- A fourth thing to show
- Just filling space here
- Hello there

ITEMIZE WRAPPERS / 4

- **Uses environment** `itemizefill`
- itemsep is: 0.0pt plus 1.0fill
- Automatically uses all vertical space
- **Warning:** This does not work in `\splitV` (yet?)
